Education

Don Bosco Institute of Technology

B.E. in Electronics and Communication Engineering

Bengaluru, Karnataka

Experience

Rooman Technologies

Sep 2024 – Mar 2025

Software Engineer Intern

Bengaluru, Karnataka

- Engineered responsive, accessible React.js web applications across operational workflows, translating Figma mockups into 20+ modular, reusable UI components.
- Refactored complex state management using Redux Toolkit and custom React hooks, eliminating prop drilling by 40% and preventing unnecessary component re-renders.
- Built robust client-side forms with strict schema validation and error-state handling, reducing invalid user submissions by 25%.
- Integrated 15+ RESTful endpoints via Axios with centralized interceptors for automatic JWT token refresh, loading skeletons, and graceful network failure recovery.
- Diagnosed UI bottlenecks and layout shifts using Chrome DevTools and React Profiler, improving initial component mount times by 20%.

Projects

TWYNK – Full-Stack Social Platform | *React.js, Express.js, MongoDB, React Query, Tailwind CSS, JWT* Oct 2025

- Architected a scalable, interactive web platform featuring dynamic feeds, nested comments, and multi-page routing with protected session guards.
- Reduced redundant network calls by 35% by implementing TanStack React Query caching, background refetching, and fine-tuned stale-time invalidation strategies.
- Engineered optimistic UI updates for real-time interactions (likes, comments), reducing perceived user latency by 200ms without blocking on API roundtrips. And used Lazy Loading for Performance Optimization
- Built resilient error boundaries and fallback states to ensure uninterrupted UX during intermittent API outages.

- Live: twynk.onrender.com

Note Forge–Note Workspace | *Next.js 14 (App Router), TypeScript, Redux Toolkit, PostgreSQL, Drizzle ORM, Zod* Dec 2025

- Developed a full-stack document workspace utilizing Next.js Server/Client Component paradigms to optimize bundle size and first-contentful paint.
- Implemented type-safe form validation using React Hook Form and Zod schemas, handling both client-side constraints and server action error responses.
- Designed clean multi-page routing with dynamic route parameters, query-based search filters, and secure session management via OAuth.
- Constructed a modern, accessible UI using Tailwind CSS and shadcn/ui components, adhering to strict WCAG accessibility guidelines.

- Live: noteforge-six.vercel.app

Vocably – AI Language Learning App | *React Native, TypeScript, Expo, Supabase, AsyncStorage* Mar 2026

- Built a cross-platform mobile app featuring interactive flashcards, AI roleplay scenarios, and real-time pronunciation audio streaming.
- Optimized virtualized list rendering (FlatList) for 500+ items using memoized components and `getItemLayout`, sustaining smooth 60fps scrolling.
- Structured offline-first data persistence and encrypted local session storage to guarantee state consistency across app reboots.
- GitHub: github.com/abhijadhav03/vocablly

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL, Python, C++

Frontend Web: React.js, Next.js (App Router), React Query (TanStack), Redux Toolkit, HTML5, CSS3, Tailwind CSS, shadcn/ui

Forms & Testing: React Hook Form, Zod, React Testing Library, Jest, Vitest

Architecture & Concepts: Component Lifecycle, Custom Hooks, Closures, Event Loop, Figma-to-Code, DevTools Profiling

Backend & Tools: Node.js, Express.js, RESTful APIs, PostgreSQL, MongoDB, Git, GitHub Actions, Vercel, Postman
